6. Other Application Notice

1. When designing the connection tube, the installer should consider the vibration stress at the compressor's start and stop to ensure it doesn't get damaged.
2. Do not put a compressor on its side or turn it over. It must always remain standing upright.
3. Please install the compressor right after removing the plugs.
4. When the amount of refrigerant charged in the air conditioner is over the max amount allowable, compressor specification should be discussed. (Install additional accumulator, oil heater, etc.)
5. Refrigerant must always be filled from the high side of the refrigeration system.
6. Avoiding compressor running in reverse by connecting electrical wires correctly.
7. Do not allow electric cables or the like to touch compressor directly.
8. To avoid water droplets and dust into the compressor, moisture-proof or dust-proof measures must be taken.
9. For split type air conditioners, the maximum piping length should be 49.21 feet, and elevation difference should be within 16.4 feet.
10. Wear safety goggles when servicing the unit.
